Cylinder head gasket 867.700

Renault | Nissan | Mercedes-Benz | R9M | OM626

Changes to appearance

As part of the ongoing technical development of the cylinder head gasket 867.700, optimisations have been implemented at two points on the gasket. The colour of the seam coating has been changed from the previous black to red and provides increased temperature resistance.

In addition, the connection between the individual metal layers has been changed. The gasket with item number 598.670, which is no longer produced, was connected with four weld spots. On the successor gasket, item number 867.700, the metal layers are now permanently connected to each other with rivets. This does not essentially change anything in terms of the installation of the cylinder head gasket.

The type of connection has no influence on the gas and fluid impermeability functions of the cylinder head gasket.

Despite the significant changes, the original part number has been retained.
